

**K20N HAND
SANDING RANGE**

HAND SANDING RANGE

The economical Flexovit K20N range of hand sanding products features an aluminium oxide grain for fast cut and good material removal at a low initial cost, offering an excellent price-performance ratio. The products conform to flat and complex surfaces with ease, delivering better finishes on your material. Our easy to use dispenser unit for our cloth roll in a box offers simple storage and product protection to eliminate waste and damage.

The two variations of hand sanding products are ideal for small-volume metal and woodworking applications, including scale and rust removal, scouring and light deburring and blending and fine sanding. The cloth sheets offer heavy and light duty hand sanding depending on the chosen grit.

ALUMINIUM OXIDE CLOTH SHEETS
